

AJAX AVEC jQUERY

Juin 2018

1.

Introduction

Utilisation des méthodes AJAX de jQuery

Méthodes

jQuery propose quelques méthodes raccourcies pour faire des appels AJAX

```
$.ajax(url [, settings]);
```

```
$.post(url [, data] [, success] [, dataType]);
```

```
$.get(url [, data] [, success] [, dataType]);
```

```
$.getJSON(url [, data] [, success]);
```

\$.ajax

```
$.ajax({  
  url: "traitement.php",  
  method: "POST",  
  data: {},  
  dataType: "html",  
}).done(function(data){  
  // OK  
});
```

Exemple

```
$.ajax({  
  method: "POST",  
  url: "login.php",  
  data: { username: "John", password: "plop", token: "154AD0" }  
}).done(function( message ) {  
  console.log( "All right: " + message );  
}).fail(function(jqXHR, message ) {  
  console.log( "Error: " + message );  
});
```
